

Prism Interacta

Post-digital neuropsychological assessment

Dementia

Stroke and Traumatic Brain Injury

Neurodevelopmental disorders

Children & neurodevelopmental behavioural intellectual disorders, Training Module, WHO 2021

 **10M** new cases each year Worldwide

Patterson, C. (2018). *World Alzheimer Report 2018.*

 **33.7M** new cases each year Worldwide

Rajsic, et al. (2019). Economic burden of stroke: a systematic review on post-stroke care. *Eur Joul of Health Econ*, 20(1), 107-134.

 **~3-7%**

Of children in Europe/USA

 **~7000**

new people diagnosed in DK each year

 **~30k** new cases in DK each year

9600 tests/year for dementia alone

Cognitive assessment

Paper-based

73% of all post-stroke

OXFORD UNIVERSITY PRESS

Archives of Clinical Neuropsychology 32 (2017) 541-554

The Technology Crisis in Neuropsychology

Justin B. Miller^{1,*}, William B. Barr²
Neuropsychologist

Why are neuropsychologists so reluctant to embrace modern assessment techniques?

Ben Schmand

Archives of CLINICAL NEUROPSYCHOLOGY

- Flexibility
- Suits frail and older adults uncomfortable with tablets/computers
- Large amount of normative data from years of use

VS.

Digital

Time consuming manual scoring

Manual reporting in EHR

No decision support/interpretation aid

No data integration and traceability

Poor sensitivity/specificity of the tests

“Every first stroke assessment requires about 1h spent in consultation with the patient... Scoring and reporting takes 45min to 1h...”

Maria Nordfang

Former clinical neuropsychologist at Rigshospitalet Glostrup

Science Program Director, Lundbeckfonden

Our solution: digitalize differently using Computer-Vision and AI

Our MVP:

 **2** A **deep-learning** pipeline for the digitization of **paper-templates** and **behaviours**

 **3** **Cloud analytics** (test scoring, relative test performance) and Report Generation

 **4** Collection of anonymous behavioural and objective data (e.g. gaze, finger movement)

 **5** **Web-portal** for report consultation and decision-aid

 **1** An **edge-computing front-end** for *anonymous* smartphones or eye-tracking glasses video acquisition

 Development status indicator

Our revenue model:

- Subscription based / month
- Premium features:
 - Objective measures collection

Before

1a

Available set of compatible tests

1b

User develop own test

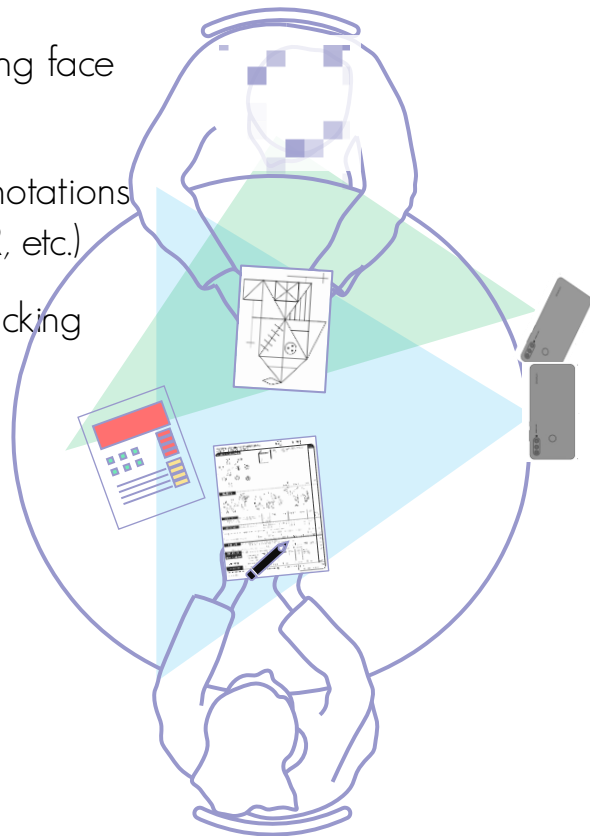

During the assessment

2

- Edge-computing face blurring
- Test sheet annotations capture (OCR, etc.)
- Behaviour tracking

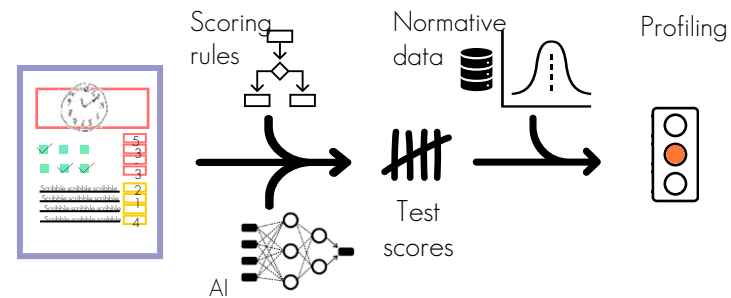

After

3

Automated test scoring and decision-support

4

- Data export
- Report generation,
- EHR/EPR integration

Two of the most administered stroke-related tests already implemented:

Test 1

Cancellation task

Test 2

Trail-making task

Example 1: Capture using conventional smartphone

Example 2: Capture using Pupil Labs Invisible eye-tracking glasses

 Re: 21.3

Phase 1 - Operational efficiency in clinical routine,
Academic excellence in research

Phase 2 - Better diagnostics and monitoring

Clinical routine

- Traceability/QA
- Cost-efficiency

Clinicians

- Flexibility, time efficiency and inclusiveness of paper-based testing
- Reduced administrative load
- Empathy and reduced mental load

Research

Researchers

- Design own paper/physical tests
- Behavioural research easily executed *during routine practice*

Strong presence in clinical routine = Better position to implement new tests/findings

Clinical routine

Patients

- Better cognitive screening
- Better differential diagnosis
- Better monitoring/follow-up

Big pharma - clinical investigations

Big Pharma

- New biomarkers for drug-trial investigation
- Quality assurance - monitoring of clinical trials

Phase 1 - Operational efficiency in clinical routine,
Academic excellence in research

Phase 2 - Better diagnostics and monitoring

2026

Targeted institutions:

- Large Research Hospitals DK

- Large Research Hospitals EU

- Large Research Hospitals EU + US
- Private hospitals EU + US

- Large and medium-size hospitals Worldwide
- Big Pharma QA (brain-drug trials)

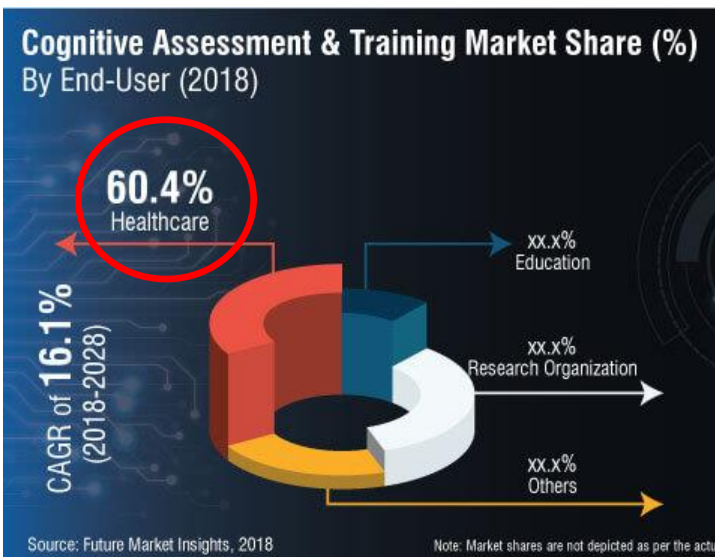

Targeted buyers:

Business Potential and competition

The Cognitive assessment and training market

- USD 11.4 billion market by 2025
- CAGR: 29.3%

Cognitive Assessment and Training Market by Component, Organization Size, Application (Clinical Trials, Learning, and Research), Vertical (Healthcare and Life Sciences, Education, and Corporate), and Region - Global Forecast to 2025 - Marketsandmarkets

Competitive landscape

	Clinical routine	Research	Clinical trial monitoring for Big pharma
Pen-and-paper 	<ul style="list-style-type: none"> • Many academic groups (e.g Oxford University Innovation) • Pearson Assessment • PRA • Etc. 	Prism Interacta	Prism Interacta

Next steps

We have obtained the commitment to execute a *clinical and operational efficiency pilot in stroke patients at Rigshospitalet*

Next-gen features on gesture recognition and gaze-tracking

Clinical/operational pilot results at Rigshospitalet

Technical developments

Beta ready for clin. eval.

- Oxford Cognitive Screening test
- Android App
- Test scoring
- Report generation

Performance specs.

- Accuracy
- Robustness

MVP ready

- DB scaled up
- Account management
- Cyber-security/data privacy
- Web-app targeting general public
