We combine

operations experience and business understanding

with

state-of-the-art expertise in applied artificial intelligence and machine learning analytics & tools

and

work with business owners to identify
high value opportunities for improved operational excellence

to

provide solutions that harvest the benefits from lean in biotech
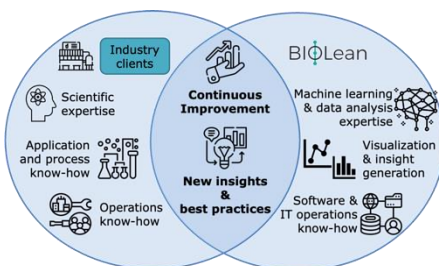

BIOLean

About BioLean

BioLean teams up with clients in the pharma, biotech and food industry to solve business critical issues in laboratory, pilot and plant operations through advanced data analysis.

BioLean's competent computer scientists deploy state-of-the-art industrial AI and machine learning techniques to provide clients with new knowledge and deep insights from small and big data.

Data-driven decisions made in real-time is secured by our BioLean prediction engine tailored to solve the business-critical issues and raise the bar of operational excellence.

Our clients benefit from improved operation of pilot and production assets, increased productivity, and reduced risks.

We help clients to predict crucial events and unusual patterns in real-time based on historical and current performance and convey otherwise hidden information into new knowledge and actionable information.
