OnDemand Blockchain Tokenization System

Our Blockchain based Tokenization System is a highly functional platform used to tokenise a variety of assets, such as real estate, companies, digital products e.t.c.. The system allows a variety of user roles that can redefine the entire system and it's business model. The system is ideal for existing corporations and can be used as tech to build startups.

Product Features

Tokenize your assets

The platform lets you tokenize your assets in any manner you deem to be right

Create a marketplace

We provide you a system to create a custom marketplace where you or your users can sell and buy a variety of tokens

Configure your marketplace

The marketplace can be configured to let only to buy tokens, to buy and sell tokens or to buy but sell from select people.

Track all tokens

Each token will be created on the blockchain, this allows for each token to be trackable and be added to the ledger

Token Buy Back

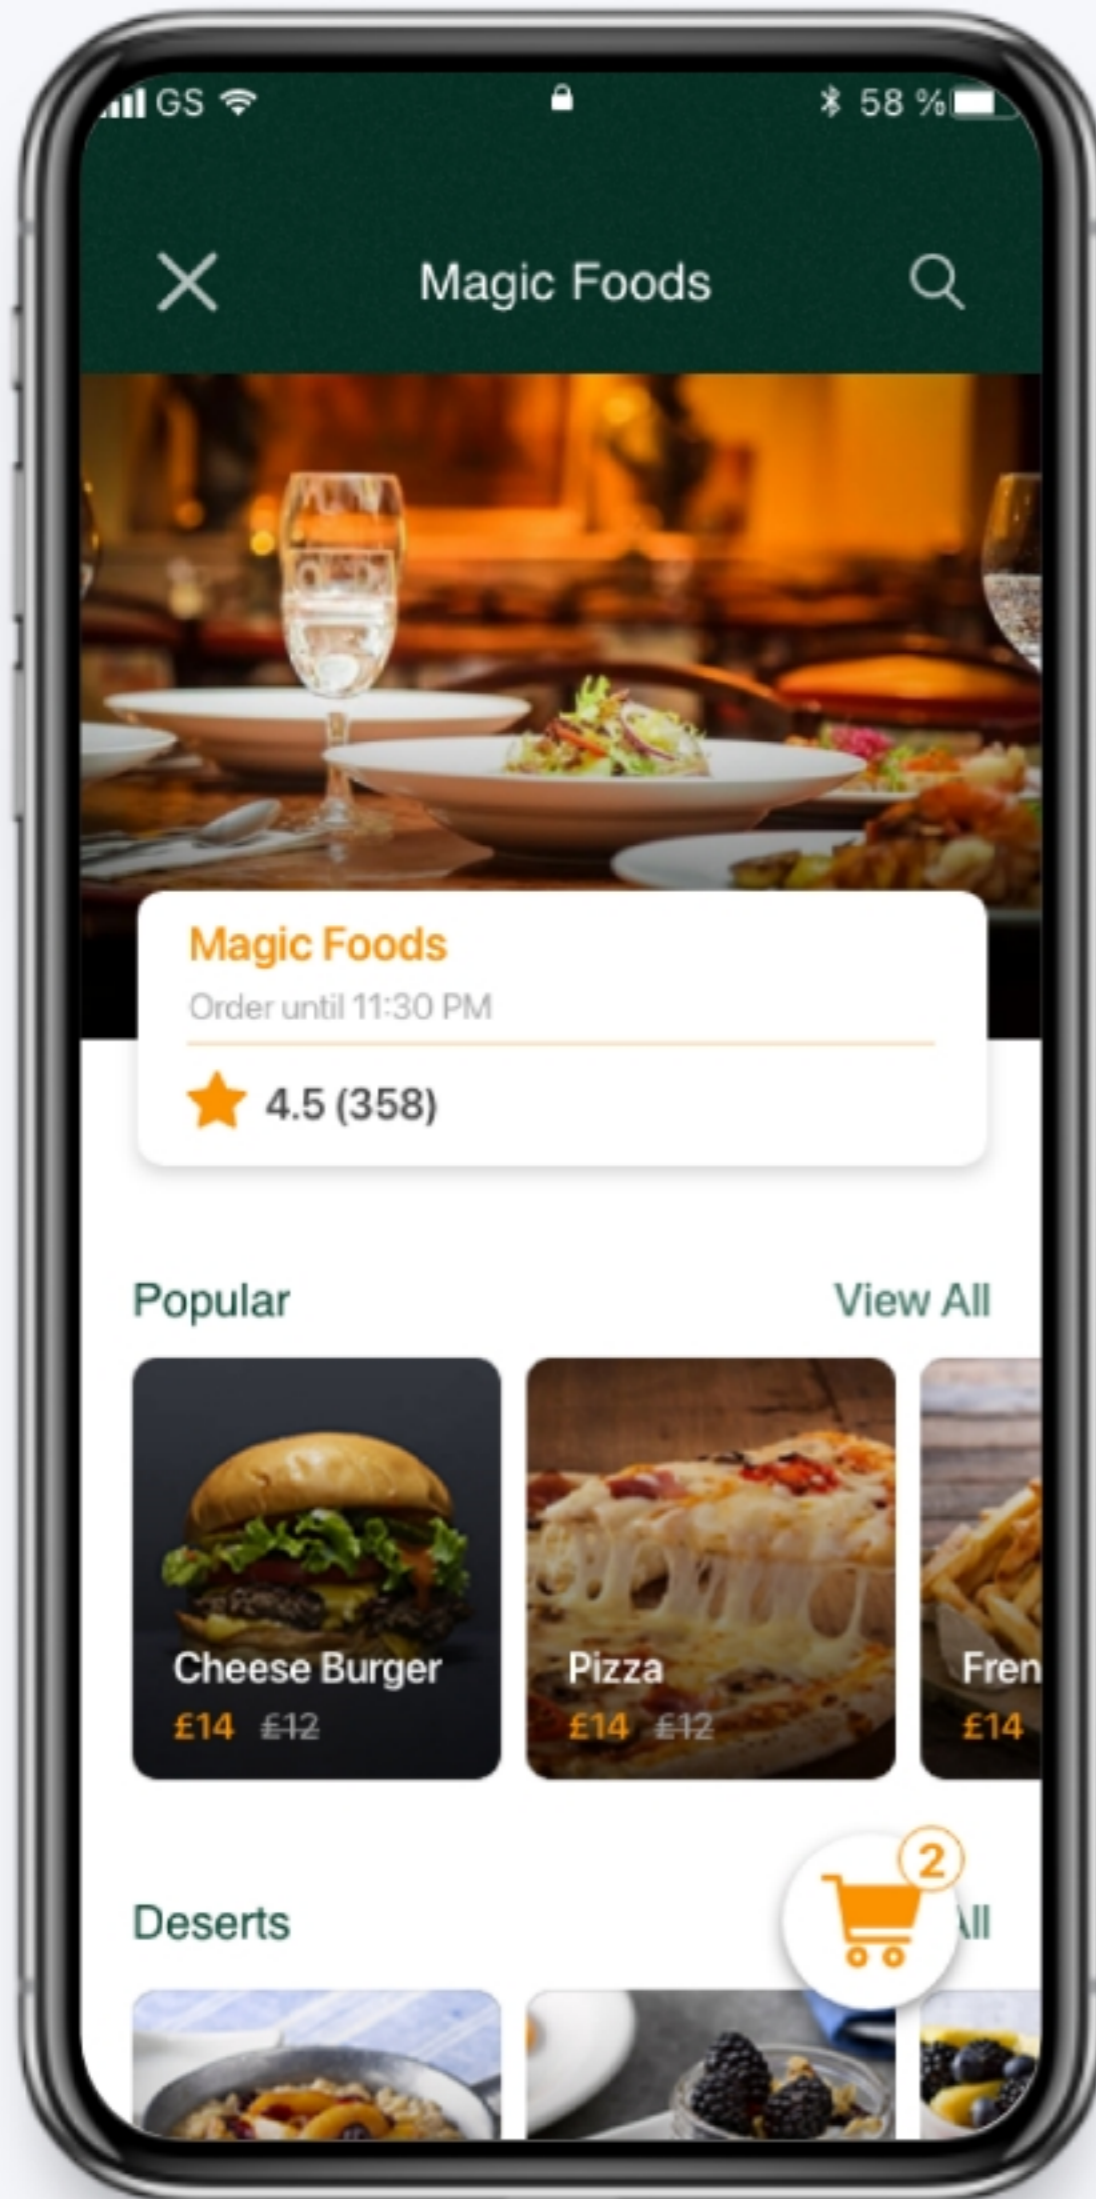

Sellers who have sold their assets in the form of tokens can also request buy backs, this will send notification to all initial buyers to optionally sell the original seller their tokens

Online Payment With Secure E-Wallet

The entire system is operated on blockchain and also has an integrated etherium wallet that allows transactions between conventional currencies and cryptocurrencies

Food Ordering Platform

Geo-location based restaurants, exclusive discount deals, discount vouchers, referral bonus, multiple payment systems combined with our unique and progressive user interface makes our food delivery solution one of its kind. Delivery codes and QR codes for efficient and timely delivery features help reducing operational headaches for admin and restaurants. It supports both marketplace and for your own restaurant or food startup.
